

MUFK **INTEGRATED**

CLIENT BROCHURE | 2026

ONE PLATFORM. CLEARER CONTROL.

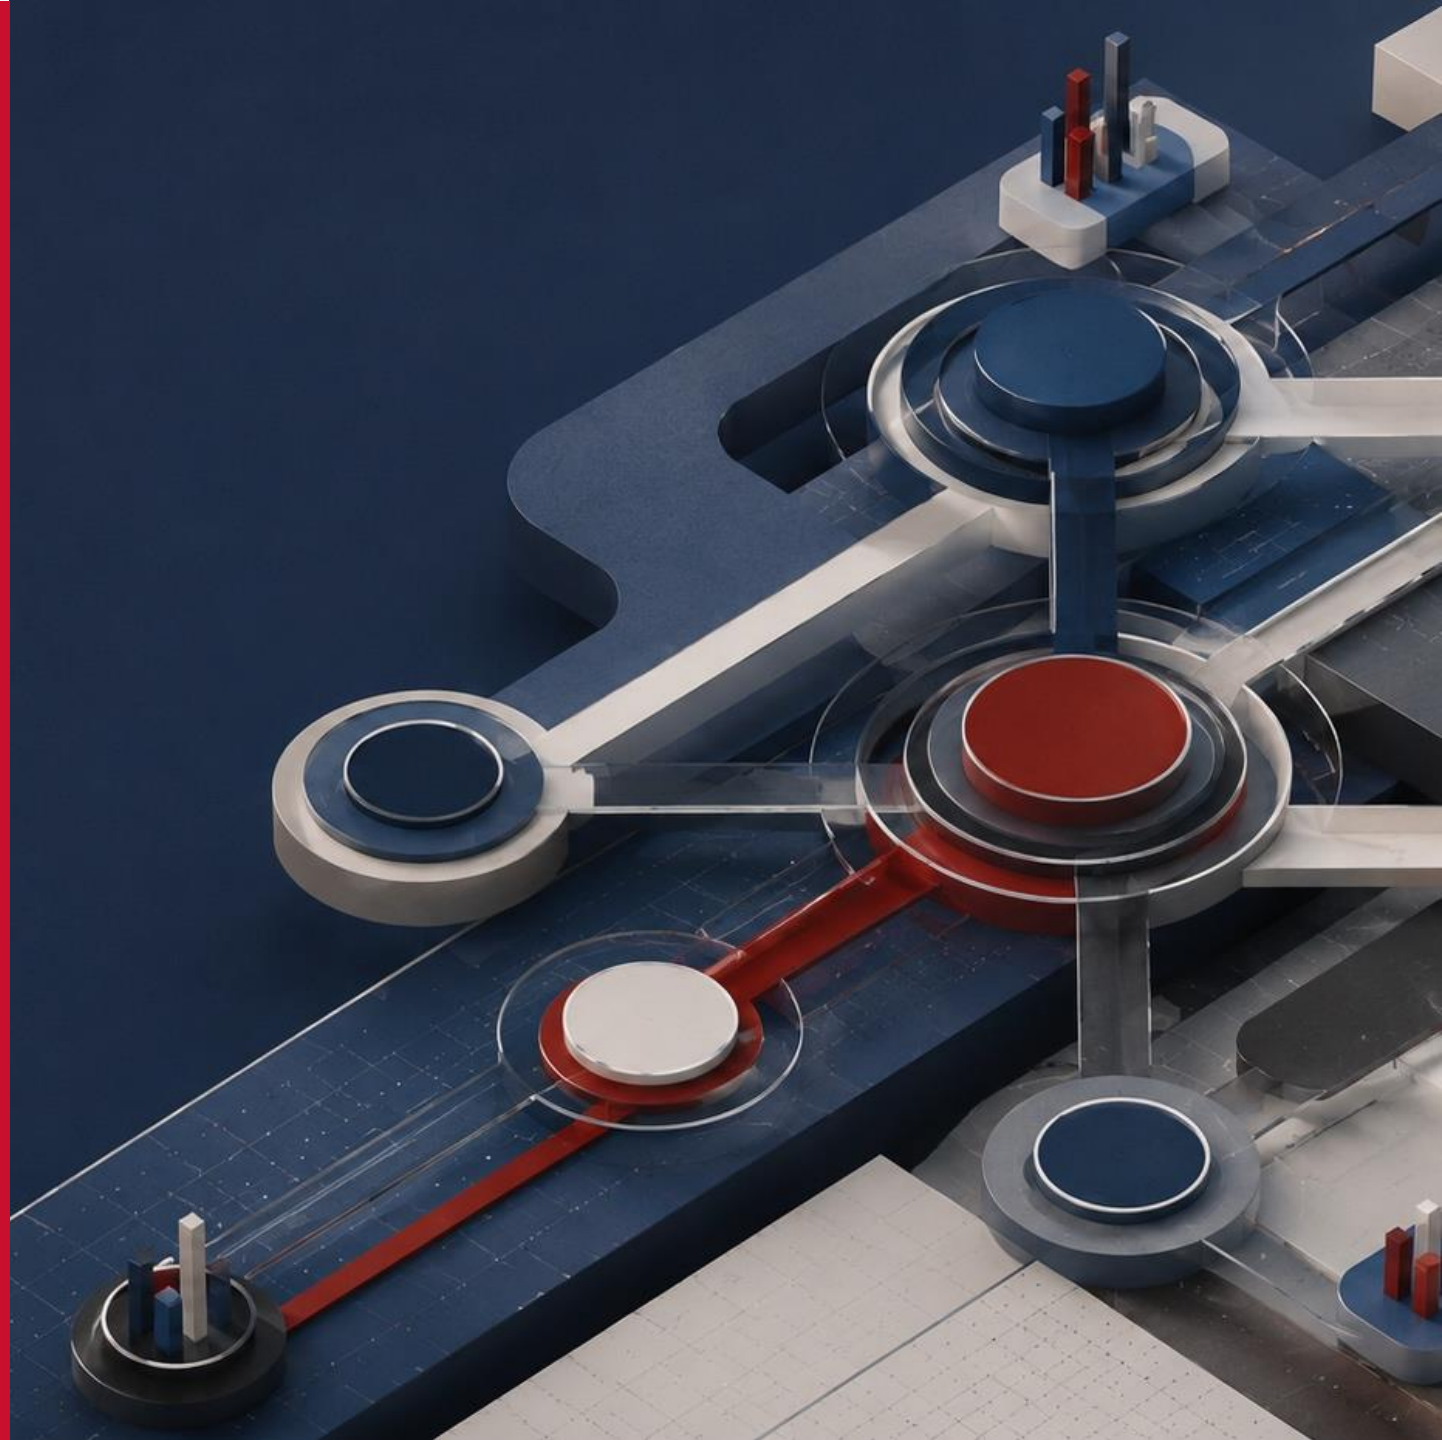

Coordinate incidents, evidence, suppliers, assets and workflow decisions in one configurable operating environment.

CONTROL

VISIBILITY

ACCOUNTABILITY

Pretoria, South Africa

Bring six operational records into one coordinated platform

Capture information once, connect it to the work and make responsibility easier to see.

01 Incidents & service events

Capture, classify, assign and track operational matters from intake to resolution.

02 Claims & case workflows

Coordinate records, evidence, decisions, approvals and follow-up actions.

03 Assessments & inspections

Record findings, recommendations, supporting evidence and outcomes.

04 Suppliers & contractors

Connect relevant provider information and activity to the work performed.

05 Assets & locations

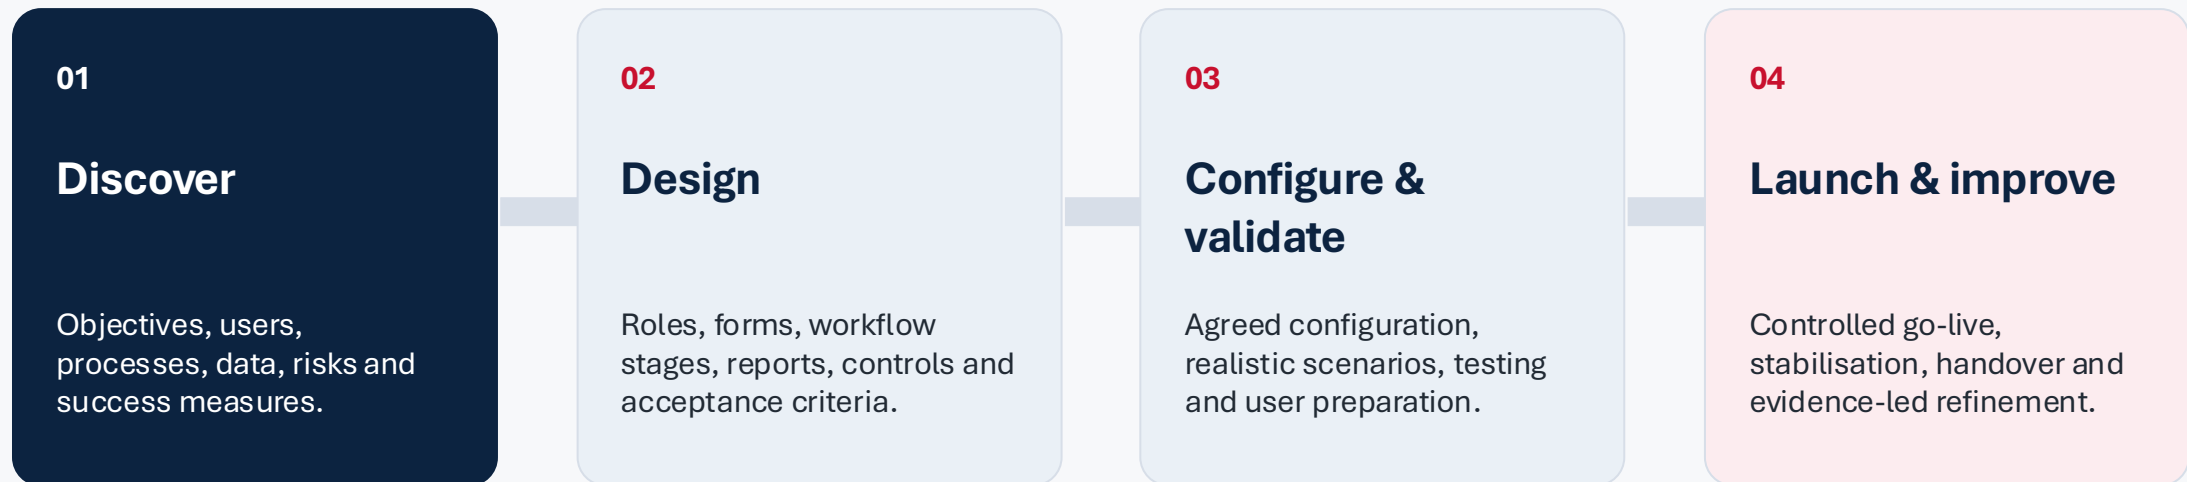

Relate incidents, actions and decisions to the affected operational context.

06 Documents & communications

Keep photographs, quotations, invoices, approvals and records with the relevant matter.

Move from a defined need to controlled go-live

Start with one high-value process, validate realistic scenarios and expand from evidence.

Evidence before assurance

Hosting, encryption, backup, logging, retention and incident-response statements are confirmed against current technical evidence during security review and contracting.

NEXT STEP

Start with a focused discovery

Bring three inputs

- **One process**
A high-value workflow or operational pain point.
- **The people**
Users, roles and decision-makers involved.
- **The information**
Records, evidence and approvals needed.

MUFK can then prepare

- **A context-based demonstration**
- **A defined scope and assumptions**
- **An implementation proposal**
With responsibilities and agreed next steps.
